b. Computer Tip: Easily undo multiple actions in Excel. If you're a longtime keyboard jockey, you probably instinctively use the CTRL + Z shortcut when you want to UNDO a change you've made. However, if you need to backtrack through many steps, you may not recall exactly how many steps you need to undo. Chances are you'll backtrack too far and then wind up redoing more steps than you had planned. The next time you find yourself in this situation, use the dropdown arrows next to Excel's Undo and Redo buttons. These provide you with a running list of your recent actions so you can easily undo or repeat exactly the steps you want.

c. Scheduled Classes: Note: Walk-ins are always welcome!
